Calculation of the projection distance

For a screen size different from the above, use the equation below to calculate the projection distance.

Aspect ratio 4:3

minimum $L (m) = (\text{diagonal screen size in inches}) \times 0.03962$

maximum $L (m) = (\text{diagonal screen size in inches}) \times 0.04369$

NOTE:

Distances calculated with the above equations will include a slight error.

Installable angle

Install the projector at an angle within the range shown below.

• **Vertical direction**

The projector may be installed at a vertical angle of 10°.

• **Horizontal direction**

The projector may be installed at a horizontal angle of 20°.

Cable specifications

Basic format

Transmission from the computer begins with STX, then the ID, command, parameter, and ETX are sent in this order. Add parameters according to the details of control.

* STX and ETX are character chords. STX is 02 and ETX is 03 when expressed in hexadecimal.

CAUTION

- It may not be possible to send or receive commands for about 10 to 60 seconds when the lamp is first turned on. If this occurs, wait for 60 seconds, then try sending or receiving again.
- When sending multiple commands, be sure to wait for at least 0.5 second after receiving a response from the projector before sending the next command.
- Additional time is sometimes required for response due to processing inside the projector. Set the time-out period for command response to 10 seconds or more.

Control commands

Command : Parameter	Function		Callback
PON	POWER (STANDBY)	Standby power on	PON
POF		Standby power off	POF
IIS:HD1	INPUT SELECT	HDMI	IIS:HD1
IIS:RG1		Computer 1	IIS:RG1
IIS:RG2		Computer 2	IIS:RG2
IIS:VID		Video	IIS:VID
OSH:0	AV MUTE	AV mute off	OSH:0
OSH:1		AV mute on	OSH:1

- * Do not send PON, POF or OSH commands continuously in a short period of time. Doing so may burst the lamp or shorten the lamp replacement cycle.
- * When a command that cannot be executed during standby mode is sent, the projector will send an ER401 command in reply.

Command example

To set the AV mute function off, send the command as shown below.

```

STX   OSH   :   0   ETX
  |       |       |       |
  Start  Command Parameter End
    
```

NOTE: When sending commands without parameters, a colon (:) is not necessary.

Notes on projector placement and operation

The projector uses a high-wattage lamp that becomes very hot during operation. Please observe the following precautions.

1. Never place objects on top of the projector while it is operating.
2. Make sure there is the unobstructed space as shown below or more around the projector's exhaust openings. In addition to this space, also ensure that there is a sufficient work space for removing and installing the lamp, air filter and other parts.
3. Make sure that nothing blocks the projector's air intake and exhaust openings. Also, install the projector so that cool or hot air from other air conditioning equipment does not flow directly toward the projector's air intake or exhaust openings.
4. Do not install the projector in an enclosed space. If it is necessary to install it in an enclosed space, add a separate ventilation system. If ventilation is insufficient, hot air will accumulate at the intake opening. This may cause the projector's protective circuit to interrupt projector operation.

Direction of air intake and exhaust

Operating the projector continuously

1. If the projector is to be operated continuously 22 hours or more, lamp replacement cycle duration becomes shorter.
2. The lamp replacement cycle duration becomes shorter if the projector is operated repeatedly for short periods (one hour or less).
