

KX-TG8061EB DECT Cordless Telephone

Features

200 Name and Number Phonebook

Up to 200 names and phone numbers can be entered and stored. The phonebook allows you to make calls without having to dial manually. You simply search for the name and select the number you want to dial.

Long Talk & Standby Time

One full charge of the battery will provide about 12 hours of talking time before the battery will need re-charging. When the handset is not being used but left off the base station, the charge will be retained for up to 250 hours before requiring a recharge.

'Clear Sound' Technology

A High-precision error correction system ensures clear conversation with less sound glitches, allowing you to enjoy a smooth, error-free conversation even when you're far away from the base unit.

Speakerphone Function

If you want other people in the room to join in your conversation or you want to use the phone without holding it to your ear, no problem, just press the "speakerphone" button.

One Touch Eco Mode Button

One touch Eco modes let you lower the power consumption by one touch pressing the eco button on the handset. In eco mode, the signal output is reduced by 90%*. * Compared to the normal mode.

Night Mode

Off to bed or need to put the baby to sleep? Now its simple to set times when you don't want the phone to ring so you will never be disturbed. Instead the handset will flash silently.

Wall-mountable Base Station

With 2 simple screws (not supplied) the base station can be hung on the wall. This frees up space on your work surfaces or cabinet furniture.

Expandable - Up To Six Handsets

For large houses or large families you can add additional handsets. Up to six handsets (available to purchase separately) can be paired to the master base unit allowing every family member to have their own handset or allowing handsets to be placed conveniently around the home in different rooms.

18 Minute Answer Machine with Counter

The base station includes a built-in Telephone Answering Machine (TAM) that automatically answers and takes a message from the caller when you cannot answer the call yourself. This models digital recording system captures up to 18 minutes of messages. You can see the message count without operating the handset. Voicemail messages can pile up while you're away. Having to operate the handset just to see how many messages you have is bothersome. The handy counter is located on the base unit and makes it easy to see how many messages you have at a glance when you return home.

Visual Message List / Caller ID

When a caller leaves you a message, the handset can display the caller's details in a list. This allows you to skip to particular messages by selecting the caller's details from the list on screen. Caller ID is a subscription service offered by many telephone service providers. When an outside call is being received, the caller information is displayed. Caller information for the last 50 callers is logged in the caller list from the most recent call to the oldest. Incoming Call Barring feature allows the unit to reject calls from specified phone numbers that you do not want to answer such as junk calls. *Requires subscription to a Caller ID service.

1.45 inch Colour TFT Screen

The backlit 1.45-inch screen is easy-to-read, and helps navigate through the simple menu clearly. The TFT (thin film transistor) LCD lets you see both characters and colour images with a GSM-like clarity that wasn't possible with conventional STN (super-twisted nematic) displays.
